Project Narrative:

In early 2017, the Town of Swansboro partnered with Stewart Engineering on a preliminary design and reconfiguration of Town Hall Campus to include the addition of 70 new parking spaces. Fortunately, the Town with the help of the NC Coastal Federation and Onslow County, completed Phase 1 with an environmentally sound technique for capturing stormwater runoff from the 41 new parking spaces. The parking spaces in Phase 1 are constructed with permeable materials (eco-raster). Phase 1 opened on July 3, 2018. Phase 2 consist of approximately 30 new parking spaces. Phase 2 through the generous help of Onslow County Tourism, is fully funded. The original budget for Phase 2 includes asphalt paving, however the parking spaces are being carefully considered for permeable materials. Phase 2 planning is underway with full engineering design and anticipated to be completed in the spring of 2019.

Project Scope:

Phase 2 will include the removal of existing asphalt (approximately 5 existing spaces) and relocation of plant material and flag pole. Approximately 34 parking spaces will be added with a new access point from W. Church St. and internal access reconfiguration. As part of the original 319 Grant stormwater retrofit for Town Hall Campus, a new bioretention area will be constructed adjacent to the new spaces to retain new and existing stormwater runoff. Estimated cost of completion is $53,544.
